## Ingress Protected Mimic Systems

### CEL Ingress Protected (IP) Mimic Systems.

Our **Ingress Protected (IP)** rated mimic system is second to none. When the correct panel switchgear is used it is possible to achieve an IP rating of at least IP54. Although higher ratings are possible.

The mimic system can be reverse engraved acrylic, Stainless Steel and any front engraved laminate. Any type of graphic or text layout can be used.

## Ingress Protected Mimic Systems

The framework surrounding the mimic has the highest risk of seepage. This is why we have developed a system that eliminates all potential leakage.

The specially designed clamping arrangement holds the framework in place applying pressure to neoprene gasket seated around both the inner and outer contact surfaces on the "T" section framework. There is no need for any extra fixing other than the clamps provided, thus making the system easy and straightforward to install and maintain.

## Ingress Protected Mimic Systems

The aluminum "T" section framework is corner welded and stove enamelled for a high quality and highly resistant finish. We use 3mm thick extruded aluminium for the structure. The Framework can be any colour or finish.
