## MOSAIC MIMIC SYSTEMS

### Visual

Mosaic systems are designed to be highly visual. Coloured graphics and sharp clear symbols that complement electrical components such as meters, switches and lamps, ensures any amount of data can be displayed in an easy to view and operate package.

### Versatile

Our mosaics are versatile enough to suit any requirement. As all our mosaics are made to bespoke customer requirements, we can concept, design, and manufacture any type of visual display system. No matter how complicated the process, we can meet your needs

### Modular

Our mosaic systems are constructed from individual tiles, installed into an alloy or polycarbonate structure that can be any size or shape. It is possible to fit any type of electrical equipment into our system. The design allows for a wide variety of electrical components to be installed with a minimum of fuss.

### Modify

To have the opportunity to modify a system in the field once it has been installed with the ability to eliminate down time, minimise costs and implementation time, is one of the biggest assets of this type of system. We are able to make changes to a mosaic at any time during and long after the manufacture of the mimic, with out disrupting operations

Mosaics are used in all types on industry and are required to meet a wide Variety of standards and specifications. We offer a two system solution.

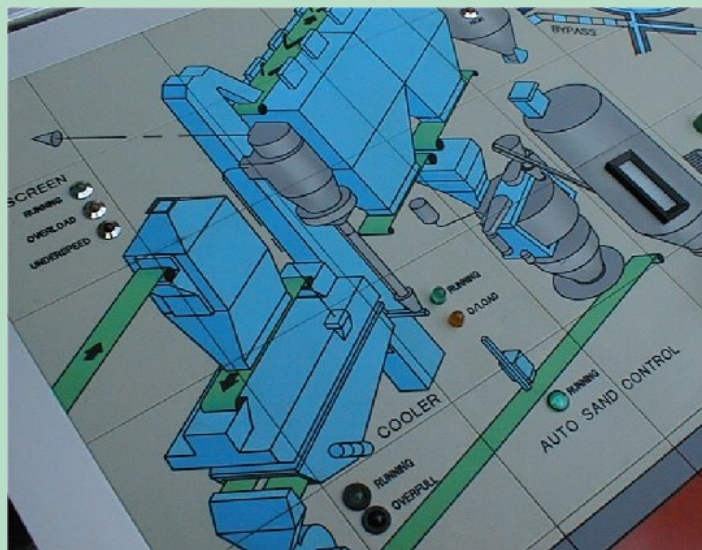

## CEL - SACO

The CEL-SACO system. Is a polycarbonate tile installed into a alloy grid structure. Ideal for mounting switch gear and heavy electrical components. It is ideally suited to tactile environments.

## CEL - BSK

The CEL-BSK Structure and tiles are made from polycarbonate, this system is better suited for high profile control room situations, where graphics, visual appeal and ease of installation are important.

## CE - S A C O

With its rigid low profile alloy sub structure, the CE-SACO mosaic system is the perfect solution to a hands on control mimic. There are virtually no restrictions to the type of equipment that can be installed into this system. Anything from VDU's to heavy multi contact switchgear can be easily installed into the tiled area. Allowing for full control of any process to take place at the mimic if required.

## CEL-BSK

The CEL-BSK mosaic system is best suited to highly graphical process overview environments, where High colour graphics and intricate detail are required. We can replicate all kinds of process overviews. From water treatment, to chemical process and site security layouts.

Both the tile and the substructure are completely constructed from lightweight polycarbonates. This gives the CEL-BSK system a unique ability to be installed almost anywhere, from an ultra low profile wall mounting to custom made walk-in enclosures.

Both our mosaic systems can be built to any size or shape, the sky's the limit.
