LABELLING

Contelec Engravings first cut it's teeth on engraving labels, legends and facias back in 1978. with the experience we have gained over the years, it's no wonder that we are one of the leading industrial label manufactures.

In those days it was all done by manual engraving machines. Times have changed, we now use CAM (computer aided manufacture) for almost every type of engraving that we produce. Using computer automated processes allows us to produce a consistent and top quality product quickly and efficiently.

We manufacture labelling for a wide Variety of markets, ranging from electrical control and instrumentation, Automotive, Healthcare, Electrical distribution and Architectural industries

Standard Legend Plates

Here are examples of Telemecanique legends, they are used for switch and pushbutton labelling. The nature of this kind of legend enables us to produce a top quality product, on time and in budget.

We also stock and engrave a wide variety of legend and legend inserts. We can supply all shapes, colours and sizes.

We can also provide bespoke legends, manufactured to meet customers individual requirements. Legends can be manufactured from a variety of materials from aluminium to polycarbonate.

LABELLING

WARNING & DANGER LABELS

In today's safety conscious world, it's becoming more and more crucial to label potentially dangerous equipment correctly. Specifications are tighter than they have ever been before

We supply many different shapes, sizes and colours of both danger and warning labels. We can also engrave any language.

LABELLING

Materials

Some time ago you could have any colour you wanted as long as it was black and white!

These days just about any colour, finish or texture can easily be achieved. We are able to produce labels, legends and facias in any colour. Sometimes a RAL or British Standard colour may be required. This is not a problem, using a reverse engraved method we can use any colour in the book.

Enhancing a label with different fonts can be affective and help to get the message across. Using our CAD CAM process we can reproduce just about any font or character type you could require.

LABELLING

Symbols & Graphics

It's no longer an issue if only a small number of highly graphical labels are required. Once, creating complicated handmade templates was necessary, thus increasing costs. Now we create items of this kind by CAD (computer aided design) CAM (computer aided manufacture) allowing seamless transition between the client and the end product.

Now it can be cost effective, quick and easy to produce detailed graphics in any quantities. This method also enables us to acquire customer approvals before any manufacturing takes place.
